PROFESSIONAL SUMMARY

Software Engineer with 3.6 years of experience building scalable backend systems using .NET Core, ASP.NET Core Web API, Microservices, and PostgreSQL. Contributed to the development and maintenance of 170+ production microservices supporting a high-availability platform handling over 100K daily transactions. Delivered measurable improvements, including up to 60% database load reduction, 40% faster API response times, and 30–50% operational efficiency gains through scalable backend solutions. Proficient in C#, Entity Framework Core, LINQ, CI/CD, Azure Fundamentals, Docker, Kubernetes, and RESTful API development. Recently upskilled in Generative AI, Azure OpenAI, Semantic Kernel, Prompt Engineering, and AI-assisted software development using Claude Code, with a strong interest in building intelligent AI-powered .NET applications. Microsoft Azure Fundamentals (AZ-900) certified.

CORE TECHNICAL SKILLS

Languages & Frameworks: C#, Java, .NET Core 6/7/8, ASP.NET Core Web API, LINQ, Entity Framework Core, MVC, JavaScript, HTML, CSS, React.js

Architecture & Design Patterns: Microservices, Distributed Systems, Event-Driven Architecture, CQRS, Domain-Driven Design (DDD), Repository Pattern, SOLID Principles

Cloud & DevOps: Microsoft Azure (AZ-900), Azure DevOps, Docker, Kubernetes, CI/CD Pipelines, GitHub Actions, Cloud-Native Development

API & Security: REST API Design, gRPC, Protobuf, Swagger/OpenAPI, JWT, API Gateway, Fluent Validation, API Versioning

AI & Generative AI: Azure OpenAI, AI Concepts & Fundamentals, AI-assisted development with Claude Code, Prompt-based automation

Tools & Methodologies: Git, GitLab, GitHub Actions, Jira, Postman, Visual Studio, VS Code, Agile, GitHub Copilot, Code Review

Testing & Observability: xUnit, Unit Testing, Integration Testing, Health Check Endpoints, Code Coverage

Databases: PostgreSQL, MySQL, SQL Server, EF Core Migrations, Query Optimization, Database Performance Tuning

PROFESSIONAL EXPERIENCE

Software Engineer | Lapis Data Analytics Pvt Ltd | Chennai

March 2025 – Present

- Owned and enhanced 170+ production microservices using .NET Core and gRPC, supporting a high-availability account platform handling 100K+ daily transactions with less than 0.1% downtime.
- Developed and optimized account, wallet, authentication, and wagering-related microservices, improving API performance and reducing database load by up to 60%.
- Implemented Protobuf-based gRPC communication across 170+ microservices, reducing inter-service latency by 30% and standardizing data contracts.
- Optimized PostgreSQL queries and Entity Framework Core LINQ operations, contributing to 40% faster API response times and improved transaction processing.
- Applied SOLID Principles, Dependency Injection, and Repository Pattern across backend services, improving maintainability and reducing technical debt.
- Established xUnit integration and unit testing for Account Service microservices, improving code quality and reducing production defects.
- Monitored Kubernetes workloads, Serilog structured logs, and health check endpoints to ensure platform reliability, faster issue detection, and seamless production deployments.

- Owned and scaled 170+ production microservices using .NET Core and gRPC, powering a video streaming platform with less than 0.1% downtime and six-figure daily transaction volume.
- Developed a Protobuf-based inter-service communication layer, cutting service-to-service latency by 30% and standardizing data contracts across 50+ services.
- Rolled out KafkaFlow event streaming with dead-letter queue handling and retry strategies, achieving zero message loss across all workflows.
- Applied SOLID principles, DDD, and Repository Pattern across the codebase, reducing estimated technical debt by 25%.
- Established xUnit test suites for 30+ microservices, increasing code coverage from 20% to 75% and cutting production bugs by 40%.
- Configured Serilog structured logging and health check endpoints across 170+ microservices, reducing mean time to detect (MTTD) by 50%.
- Led frontend development for prism-video using React (1.5 years), TypeScript and Material-UI; built a reusable component library and delivered responsive, mobile-first UIs.
- Implemented code-splitting and lazy loading on prism-video to reduce page load time by 30% and improve perceived performance.
- Added 20+ Jest unit tests and React Testing Library checks for prism-video components, improving frontend coverage and reducing production bugs by 35–40%.
- Partnered with QA and product to ship features in two-week sprints and maintained CI/CD across 3 projects with zero failed production deployments.

CERTIFICATIONS

AI & Generative AI:

- Microsoft Learn – Introduction to AI Concepts | Jul 2026
- Microsoft Learn – Build your kernel (Semantic Kernel) | Jul 2026
- Microsoft Learn – Generate Text and Conversations with .NET and Azure OpenAI Completions | Jul 2026
- Anthropic – Claude Code in Action | AI-powered development, MCP server integration, GitHub automation | Jul 2026

Cloud:

- Microsoft Certified: Microsoft Azure Fundamentals (AZ-900) | Apr 2024

Programming:

- JAVA TECH — Core Java, Advanced Java & J2EE | Jan 2022

EDUCATION

Bachelor of Engineering — Electrical and Electronics Engineering

Jun 2016 – May 2020

M. Kumarasamy College of Engineering, Karur
